

A photograph of a winter scene. A snow-covered path leads through a line of trees whose branches are heavily laden with snow. The sun is shining from the upper left, creating a bright glow and long shadows on the snow. The sky is a clear, pale blue.

Preparing for a Canadian Winter

By: Adam Read & Jenna Pinkney

University of Windsor

Quick Discussion

- Who has experienced Winter before?
- What do you already know about Winter?

Canadian Winter

- Coldest season of the year
- December 21st - March 20th
- Cold weather can start in October and last until April
- Days become shorter - becomes dark out earlier

Temperatures in Windsor

- On an average of 116 days a year the temperature is at or below 0°C
- Coldest nights can have lows in the -20's°C (rare)
- Windsor is surrounded by lakes - therefore the temperature feels even colder due to the amount of moisture in the air

Terms

- Snow
- Freezing Rain
- Wind Chill Index
- Ice
- Black Ice
- Blizzards

Snow

- Snowflakes are clusters of ice crystals that form when precipitation (rain) reaches freezing temperature (0°C or below) and falls from a cloud

Freezing Rain

- Precipitation that falls as a supercooled water droplet until it strikes a cold surface, at which point it freezes almost instantly

Wind Chill

- Is the temperature your body feels when the air temperature is combined with the wind speed
- As wind speed increases, it can carry heat away from your body much more quickly, causing skin temperature to drop

Ice

- Can form anywhere when water freezes over
- Can form as icicles on trees, houses, etc.

Black Ice

- Very slippery layer of ice!
- Usually forms with a sudden increase and decrease in temperature
- Causes snow on roads, sidewalks and driveways to melt and re-freeze quickly
- Also forms when snow or light rain falls on frozen concrete, turning it into a thin layer of ice on contact
- Black ice can look like wet concrete or pavement but it is much more slippery!

Blizzard

- Is a severe snow storm with very strong winds
- May experience very high winds and whiteouts (snow blowing everywhere)
- Snow accumulation can be significant
- It becomes difficult to walk and drive - it is advised to stay inside if possible
- Rarely happens in Windsor but can be dangerous
- If you live off campus - ask your landlord who is responsible for shovelling your walkway and driveway

Driving Safety

- Stay alert. Slow down. Stay in control.
- Drive according to road conditions
- Clear snow and ice before driving
- Consider winter tires
- Leave space, do not tailgate

Biking Safety

- Stay where the snow has been plowed
- Slow down and stay alert for ice patches
- Use rear breaks only to avoid sliding out
- WATCH OUT - cars are less aware of bikers in the winter
- Use lights and reflectors on the front and back of your bike
- Alternate tires - some have a wider tube, others have spikes
- Dress warm - extra layers help protect from the wind while riding

Clothing

- Layers! Layers! Layers!
- Hats (touques)
- Gloves/Mittens
- Scarves
- Coats
- Long Underwear
- Boots
- Socks

Good Brands

Where to Shop

- Devonshire mall: Boathouse, Hudson's Bay, Sport Check
- Winners
- Joe Fresh (The Real Canadian Superstore)
- Walmart

Cheaper Alternatives

- STK Thrift Store
- Value Village
- Goodwill
- Facebook (Marketplace)

Cough & Sneeze Etiquette

Hand Hygiene

- When to use alcohol-based hand sanitizer:
 - No access to water
 - Hands are not visibly dirty
- When to wash your hands:
 - Visibly dirty
 - After using the toilet
 - Before eating or handling food
 - After contact with contaminated surfaces (e.g., garbage bins, cleaning cloths)
 - After coughing or sneezing

Hand Hygiene

- <https://www.youtube.com/watch?v=3PmVJQUCm4E>

Personal Hygiene

- Despite the cold weather, your body still sweats
- Body odours are caused by a combination of factors including:
 - Chemicals in sweat
 - Bacteria that live on the skin
 - Unwashed clothes such as underwear and socks
 - The food that we cook with and eat

Personal Hygiene

- Why is it so important?
 - Reduce unpleasant odours
 - Minimize illness
 - Maintain professional appearance at school and work
 - Avoid judgment from peers and potential employers

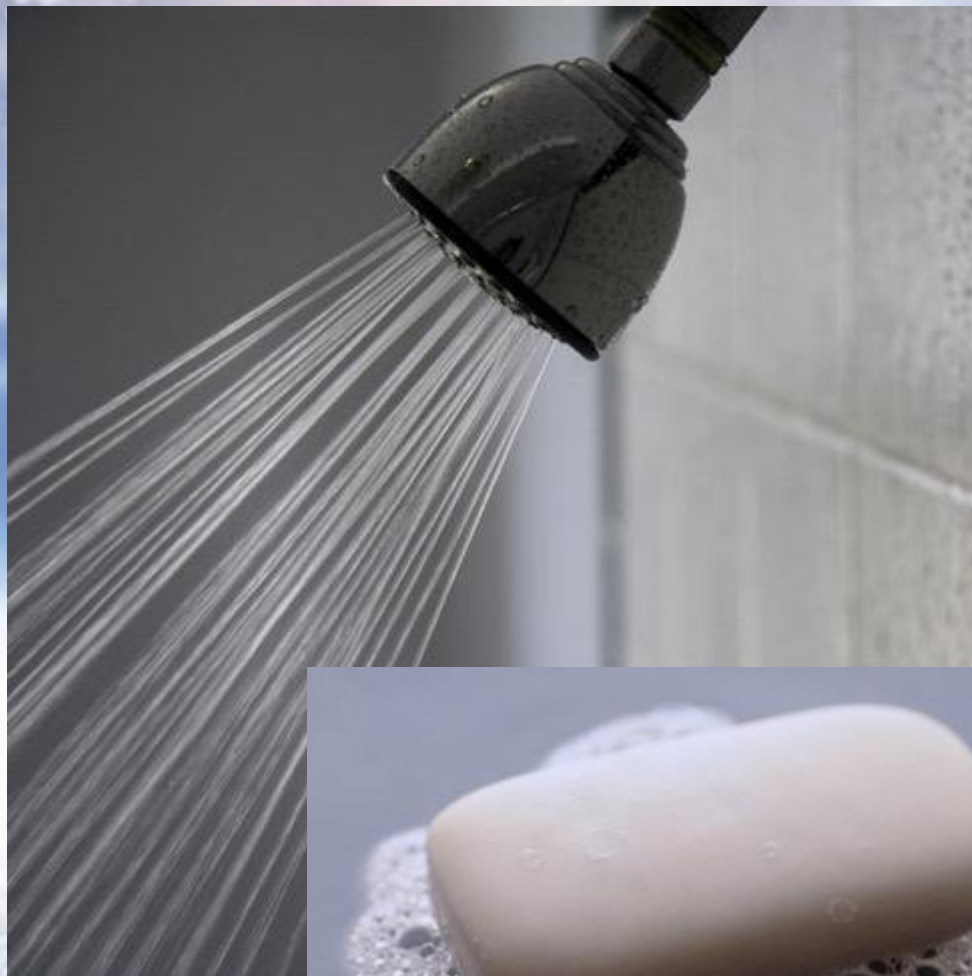

Personal Hygiene

- Remember that body odours are not only on the body!
- Change your clothes on a daily basis
- Wash clothes at least once a week
- Include winter clothes in your load of wash (coats, hats, mitts, scarves, and boot liners)

Real Shower vs. Shower in a Can

vs.

WWW.DELTIGO.FIT

Tips

- Windsor is the most Southern part of Canada - remember when travelling that other parts may be much colder
- Drink warm beverages - hot chocolate, hot apple cider, soup, tea or coffee
- Do not leave heaters or candles unattended
- Make sure your hair is dry before going outside

never
Eat
yellow
snow!

Ice Skating

Skiing & Snowboarding

Making Snowmen & Snow Angels

Visit a Sugar Bush

Summary

- Winter is **EXTREMELY** cold
- It is **CRUCIAL** to keep body warm during the winter
- Use **CAUTION** when driving or biking
- Personal hygiene should **NOT** be neglected

Time for Questions!!!

A photograph of a winter scene. The ground is covered in a thick layer of snow. Several trees, mostly bare, are covered in a light coating of snow. The sun is shining brightly from the upper left, creating a lens flare and casting long, soft shadows across the snow. The sky is a clear, pale blue. In the background, some buildings are visible through the trees.

Thank You
